

Home Protection Pack Instructions

This set includes the following:

- Four (4) Tactical Orgone Towerbusters (clear)
- Four (4) Premium Orgone Towerbusters (sky blue, sunshine yellow, deep blue sea, turquoise)
- One (1) Orgone Earth pipe in Copper Casing
- One (1) Green New Deal Breaker Home Beacon (black)

Tactical Orgone Towerbusters

These TBs can be used to gift EMF devices such as wifi routers, smart meters, cell towers, 5G poles, etc. They are the basic gifting tool for Orgone workers. To gift a device, simply place a TB near the device you wish to gift. For cell towers, distribute one-to-two tactical TBs per cell tower, within 1/4 mile of the tower. If a cell tower includes more than 6 panels on the top, always use two TBs or more when gifting. These tactical TBs can be distributed above or below ground. Whenever possible, you should gift Orgone devices closer than the 1/4 mile range of cell towers.

Premium Orgone Towerbusters

These clear top TBs function the same as the tactical version, however, due to their aesthetics, it is not recommended that you bury them or gift out in nature. These can simply be placed around the home to establish a healthy Orgone energy grid. Place near wifi routers, smart meters, and other frequency devices or large electronic devices such as large monitors and televisions. It is also recommended to place one in the bedroom or near the place where you sleep. TBs do not need to be near each other when distributed inside the home. Spread them throughout rooms to establish a grid.

Green New Deal Breaker, Home Beacon

As a larger Orgone device, use the GND Breaker near the center of the home grid, or within the room or environment where you and family and friends spend the majority of your time when inside the home. This device does not need to be directly next to an EMF source. Because of its aesthetics, it's perfect as a decorative piece for any room in the home.

Orgone Earth Pipe

Earth pipes are meant to be gifted underground. Bury the EP directly straight downward (perpendicular to the ground), with the tape side on top. EPs should be completely buried at least 2-3 inches below the surface of the ground. Depending on the location, use a hammer or small shovel to bury. In softer soil, a hammer will generally suffice. If you're looking to make the pipe appear camouflaged in the ground, use a small shovel or spade to lift a patch of soil/grass, then bury the pipe 2-3 inches below the ground and place the patch of soil/grass over the planted pipe. In some cases when gifting EPs, it helps to pour some water over the patch to seal the soil and fuse the piece back to the ground so the grass may continue to grow as before, while appearing undisturbed.

For questions about these or any of my devices, please contact me at mitch@theorgonedonor.com.

Happy Gifting!
